Honeywell Wi-Fi Thermostats

Module Setup

About:

Honeywell provides a smart thermostat that will save energy and best of all, it can be controlled from anywhere.

Setup in Total Connect Comfort Portal:

Please navigate to the Honeywell TCC website to set up all thermostat devices. <https://www.mytotalconnectcomfort.com>

All thermostats have a MAC address and CRC address that may be found on the serial sticker on the back of the thermostat. Please set up Locations and Devices in the TCC portal with the thermostat information so it may be accessed from the account.

Setup Communication:

Honeywell Wi-Fi thermostats are controlled over IP but no Address or Port information is needed. Please note that only one module is required per TCC Account. All thermostats will auto populate to the account information.

Thermostats must be connected to a Wi-Fi network with internet for control. In Compass Navigator, please do not change the L-http:// or G-http:// address from “mytotalconnectcomfort.com”

Credentials:

After clicking on the device, in the Properties Window, please insert the Username and Password for Honeywell TCC Portal.

Please note, by entering credentials, you are accepting the terms and conditions of Honeywell.

<https://www.mytotalconnectcomfort.com/portal/Account/TermsAndConditions>

Setup Complete:

Upload and update project for use.

Control:

Compass Control offers

- Honeywell Thermostat Controls
 - Thermostat Mode
