Key Digital Announces Compass Control Pro

Partner Alliance with Integra AV Receivers, Preamplifiers and Blu-ray Players

MOUNT VERNON, NY – January 29, 2018– Key Digital, an award winning developer and manufacturer of leading-edge technology for HDTV applications, has announced the integration of new device drivers for Integra products and Compass Control System, the first fully integrated major control system built from the ground up.

All Integra AV receivers, Preamplifiers and Blu-ray players feature detailed 2-way IP and RS-232 control protocols, which allow dealers to seamlessly integrate these products into the Compass Control environment. By having a massive 2-way command library dealers can easily have very detailed control and feedback of Integra devices- allowing precise control and constant feedback of information from the AV system.

Engineers at Compass Control profiled Integra AV receivers and Blu-ray players and completed a bidirectional driver that enables seamless integration of both products by Integra in the Compass Control environment while greatly reducing the installation time for integrators.

“Resulting from cooperative efforts between Key Digital and Integra, the integration of key Integra products within the Compass Control environment represents a powerful and user-friendly comprehensive solution delivering iOS-based control and entertainment functionality,” stated Key Digital’s Vice-President of Sales, Michael Lakhter. “The Compass Alliance™ Partners have come together to create a system that has full driver integration already completed, increasing efficiency for integrators,” Lakhter concluded.

About Key Digital®

Led by the “Father of DVD”, Mike Tsinberg, Key Digital® is an InfoComm, CEDIA, CES, and NAHB award winning manufacturer of professional distributed video and control system equipment.

Since 1999, Key Digital has lead the constantly evolving A/V industry by designing products that deliver industry leading quality, performance, and reliability to corporate, bar & restaurant, digital signage, education, government, and house of worship applications.

Key Digital products are designed and engineered in-house in Mount Vernon, NY. Superior quality, ease-of-installation, and versatility are the result of strenuous research, development, and testing. Expertise and unparalleled knowledge have created a unique hardware-software suite solution ideal for the consultants,

designers, and installation firms of the A/V industry. Key Digital® is known to deliver best-in-class products based on quality, performance, and reliability.

About Integra

In the summer of 1969 the Integra name made its first appearance in consumer audio with the Model 701 integrated amplifier. At the time a moniker, it was then used to identify the pinnacle of technology of each product category the parent company designed and engineered. For 30 years it served the purpose as a prestigious badge of honor. When Dolby Digital Surround was launched, the Integra name was present. When the industry's first THX Certified A/V receiver was launched, the Integra name was present; and so it has been where Integra has remained the face of leading edge technological innovation and advancement.

In 1999, addressing the rapid emergence of the custom installation (CI) channel, Integra® stepped forward as a stand-alone brand and exploded onto the scene as the first line-up of audio and video components designed and engineered exclusively for and available only through specialty audio-video integrators. Within three generations Integra established the most comprehensive authorized network of audio-video specialists around the globe and today remains the most sought after brand in the CI channel. Integra is ever-present in the support of and installations performed by the CE industry's top 100 integrators for nearly ten years consecutively.

It is Integra's passion for the best in audio and video performance and quest to design the most user and integration friendly products available that keeps it at the top.
